

**1 in 5 children in the UK are affected by eczema.
In a class of 30, around 6 may have eczema.**

Whichever emollient your child needs, this app can help you create a good routine to manage their eczema-prone skin successfully. If you would like further information about eczema, then why not visit www.eczema.org, the website of National Eczema Society. There you will find more information about eczema, treatments and support opportunities that exist either online or in your local area.

National Eczema Society does not recommend or endorse any specific products or treatments.

Emollizoo App

Updated and Improved

Now available!

A free app
for children
and families
to help
manage
eczema

The information about eczema in this app has been accredited by National Eczema Society

Emollizoo can be used on mobile phones and tablets to help teach children about eczema and encourage good emollient use through game play.

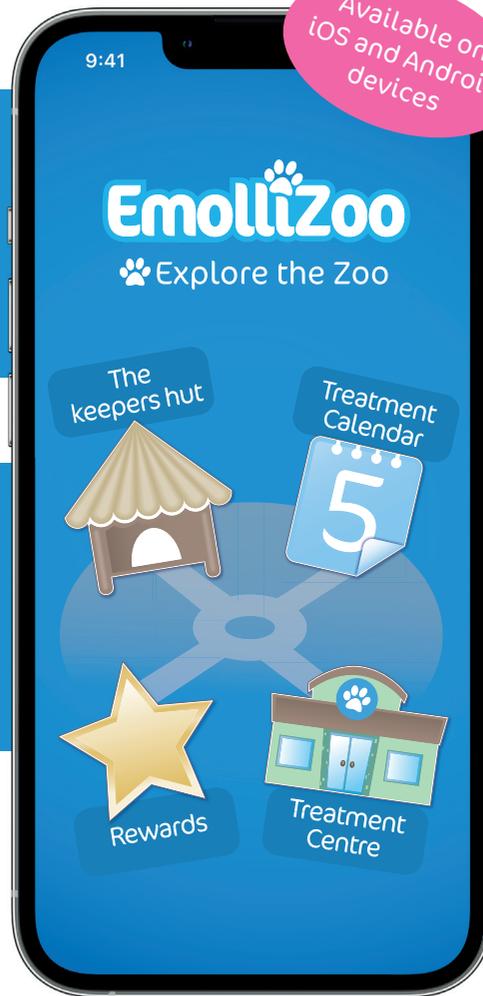

By reading along with a parent, children can find out how the zookeeper helps her animals with dry skin, and learn more about eczema and emollients.

Children collect stickers for playing the games and applying their scheduled emollients regularly. A certificate can also be earned for completing the quiz.

New feature enables users to record the severity of the child's eczema each day as clear, mild or moderate+.

Available on iOS and Android devices

Parents can personalise the treatment calendar to receive gentle reminders to encourage an emollient routine and monitor eczema.

Learn the correct way to apply emollients by looking after the animals at the zoo.

The parents' section of the app enables adults to set up treatment times and reminders, record eczema severity and learn about eczema and emollients.
